Javascript for Beginners

Lab Exercise 9

1. Create a new HTML document with the basic document structure. In the body, insert a set of script tags with the appropriate attributes so that you may insert Javascript in to the document.

2. Using the Navigator Object, output the browser name, browser version, and whether or not cookies are enabled using document.write().

- Browser Name
- Browser Version
- Cookies Enabled Y/N
- Screen Height
- Screen Width

3. Using the Screen Object properties, output the height and width of the screen using document.write().

4. Examine the documentation for the Window Object located at: http://www.w3schools.com/jsref/obj_window.asp.

Using the appropriate method(s) move the window to the top left hand corner of the screen. Change the size of the window to 300px x 300px.

5. Run your lab exercise in at least three different browsers. Note the differences in output and performance (if any).

Correct Browser Output:

```
Browser Name: Netscape
Browser Version: 5.0 (Macintosh; Intel Mac OS X 10_7_5)
AppleWebKit/537.36 (KHTML, like Gecko)
Chrome/27.0.1453.93 Safari/537.36
Cookies: true
Screen Width: 1920
Screen Height: 1080
```
